Instant cloud appliances

As a service provider, how do you succeed in the cloud hosting market? You need a cloud platform with the performance and reliability your customers expect - and the ability to handle any workload your customers give you.

The new instant cloud appliances from Dell and OnApp are a proven fast-track to the cloud - whether you're entering the cloud market for the first time, or adding scale to an existing cloud.

Ultra-reliable cloud infrastructure

Each cloud appliance uses ultra-reliable, high performance Dell servers and switches as the backbone of your cloud.

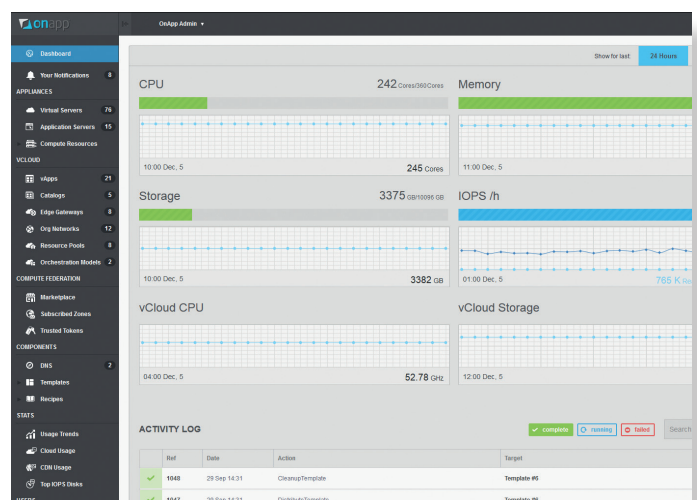

- Fully standards-based
- Industry-leading price/performance
- Dell ProSupport included
- 100% certified for OnApp down to the firmware

A complete go-to-market platform

Each cloud appliance is factory-installed with the latest version of OnApp - the complete cloud platform for service providers:

- Robust, intuitive and proven at 1,000s of providers
- Full service automation via one UI
- Xen, KVM, VMware and EC2 support
- Public, private & hybrid cloud
- Container servers (Docker management)
- Bare metal, SaaS/PaaS hosting
- CDN, backup and DR

Plus, there's the OnApp Federation - a ready-made marketplace you can use to extend your cloud on demand with new locations, and sell spare capacity too.

Designed for service providers

Dell and OnApp cloud appliances give you unbeatable time-to-market.

Choose from cloud appliances for smaller and larger clouds, or customize your own. With fully racked options available too, you can just add power, connect to your network and start selling cloud.

- Complete cloud appliance: get OnApp pre-installed on certified Dell hardware
- OnApp provides full orchestration and automation suite via a whitelabel UI
- Dell infrastructure provides enterprise-class price/performance and reliability
- Uses high performance integrated storage - no external SAN required
